

Noncommutative Geometries in String and Brane Theory

(2 Lectures)

M. M. Sheikh Jabbari

School of Physics

Institute for Studies in Theoretical Physics and Mathematics (IPM)

Tehran, Iran

In the past couple of years, especially with the discovery of D-branes, the general belief that structure of quantum space-time is noncommutative has gained many pieces of supportive evidence. In these lectures, I'll try to brief you on the two ways noncommutativity of space-time appears within string theory and put them in a unified footing.
