Gluing Formulas in Heegaard Floer Homology

E. Eftekhary
Harvard University
USA

I do not know if I should really talk about this or not in this conference. This a work of mine that describes how the HFH changes when two three-manifolds with torus boundary are glued along their boundary. Since most people are not working on this subject, I can just talk more extensively about general results in Heegaard Floer homology and just comment on my work instead of going for the details.
