April 21-26, 2007, IPM, Tehran*

## Quantum Physics and Algebraic Graph Theory

**Ch. Godsil**

*University of Waterloo  
Ontario, Canada*

The possibility of a quantum computer has lead to much new work in theoretical physics. Naturally enough, this work has raised many new mathematical problems. What is perhaps surprising is that it has lead to interesting problems in algebraic theory. I will discuss some of these problems, and the progress we have made on them.
