

# Contents

Acknowledgements . . . . .	i
Preface . . . . .	iii
Notation . . . . .	v
<b>Lecture 1 General Setting</b>	<b>1</b>
1 Notation and Terminology . . . . .	1
2 Iwaniec-Kowalski Class . . . . .	3
3 Fundamental Conjectures . . . . .	4
4 What are the principal arithmo-geometric $L$ -functions? . . . .	6
5 Rankin-Selberg $L$ -functions . . . . .	7
6 What Rankin-Selberg $L$ -functions got to do with it ? . . . . .	8
<b>Lecture 2 Zeros of <math>L</math>-functions</b>	<b>13</b>
7 Zeros of $\Lambda(f, s)$ . . . . .	13
8 Non-vanishing of $L$ -functions on the line $\Re(s) = 1$ . . . . .	14
9 More on zeros of $\Lambda(f, s)$ . . . . .	16
10 A zero-free region . . . . .	19
<b>Lecture 3 Poles of <math>L</math>-functions, Examples</b>	<b>23</b>
11 Riemann Zeta Function . . . . .	23
12 Epstein Zeta Function . . . . .	25
13 Modular $L$ -functions . . . . .	32
14 Rankin-Selberg Convolution . . . . .	38
<b>Lecture 4 Applications</b>	<b>51</b>
15 The Prime Number Theorem . . . . .	51
16 The Prime Number Theorem With the Remainder . . . . .	53
17 An Effective Lower Bound . . . . .	55
18 Bounds for the Fourier Coefficients of Cusp forms . . . . .	59
