

International Workshop on Computer Vision, April 26-30, 2004, IPM, Tehran

Entropic Graph Theory

A. Hero

*Department of Electrical Engineering and Computer Science
The College of Engineering
University of Michigan
USA*

In this talk I will present an overview of the theory behind entropic graph techniques. Emphasis will be on explaining the underlying mathematical theory of convergence of various quasi-additive combinatorial graph constructions and highlighting the implications of the theory for computer vision and other applications.
