April 19-30, 2009, IPM, Tehran*

Real Multiplication and Noncommutative Geometry

(4 Lectures)

J. Plazas

*University of Utrecht
The Netherlands*

Manin's real multiplication program aims at providing a geometric framework for the study of real quadratic fields using noncommutative tori. In this series of lectures we will introduce the ideas from number theory and noncommutative geometry which play a role in the real multiplication program. We will also survey some recent results in this direction.
