

DECODING DIMENSIONS: ALGEBRAIC GEOMETRY & NUMBER THEORY UNVEILED

A long-term program on Algebraic Geometry and Number Theory

IPM, School of Mathematics

Who is it for? If algebraic geometry and number theory set off fireworks in your brain, you're our kind of people. All you need to join us is enthusiasm for the subjects, insatiable curiosity, and a willingness to log some serious - but totally fun - math hours.

What is the structure of the program? Buckle up because we're reinventing learning! We've cooked up a flexible and modular program, with classes for different groups and levels. You'll experience traditional instructor-led classes and supervised reading courses. There will be a lot of lively discussions.

What's the goal? To tame the wild beasts of algebraic geometry and number theory and uncover loads and loads of super cool stuff.

The organizational meeting is scheduled for Thursday, September 28th (Mehr 6th), at 1 pm, in lecture hall 1 at IPM.

The program will be delivered in hybrid mode to accommodate various needs. Though we strongly encourage those who can to attend in person. Please send us an email should you need the virtual meeting link. More details can be found at hedayat zadeh.info/aag/courses/program/

For further information or to register your participation, drop us an email at agnt@ipm.ir.
